Jack Yang

jack-yang.com | jackyang03@berkeley.edu

Education

University of California, Berkeley Berkeley, CA

BA, Computer Science and Applied Math (Machine Learning and Optimization); Minor, German *May 2027*

- **Coursework:** Algorithms, Machine Learning, Deep Neural Nets, Computer Vision, VLA Models, Optimization, Operating Systems

Experience

CEO 2026 – Present

UNBOX Robotics *Berkeley, CA*

- Building observability software for medical and lab robot fleets: an on-robot node records what the policy saw and did, so engineers replay a failure instead of digging through logs
- Built a market-intelligence pipeline that mines public issues, forums and SEC filings for robotics buyers' pain points

AI Research Engineer Jan 2026 – Present

UCSF NeuroAI Lab *San Francisco, CA*

- Built **vCDR-bench**, the evaluation harness for a deployed AI voice agent that administers the gold-standard dementia interview (**100+ real patient and study-partner interviews** to date)
- Designed its sweep runner, scoring engine and failure analysis; found that **transcription quality, not the LLM, decides whether an interview completes** (15% vs. 100% script coverage across speech-to-text models)
- Engineered constrained LLM scoring pipelines with schema-validated outputs, embedding-similarity scoring and utterance-level transcript traceability, so every rating can be audited

SDE / ML Intern May 2025 – Aug 2025

AWS Bedrock: Capacity Optimization Team *New York, NY*

- Put an LLM capacity agent in the on-call loop: built the MCP server and ticketing frontend so each new ticket triggers a diagnosis and a proposed change, applied only after an engineer approves
- Cut **P99 ticket time-to-resolution by 94%** for **60+ engineers**; shipped event-driven on Lambda and EventBridge with IaC and 90%+ test coverage

Software Engineering Intern June 2024 – Aug 2024

LiveX AI *Palo Alto, CA*

- Built a ranking engine and feedback-profiling pipeline on approximate nearest-neighbor vector search; recovered **$120K ARR** by flagging accounts at risk of churn

Investment Research Intern June 2023 – Aug 2023

Ocean Arete Limited ($1B macro fund) *Hong Kong S.A.R.*

- Modeled unit economics of GenAI infrastructure with sensitivity analysis on compute costs across 3 asset classes; presented theses on LLM adoption in enterprise SaaS to the CEO

Projects

Personal Dashboard | *FastAPI, React, SQLite, Plaid, Garmin* | demo 2026

- Health, contacts and finance dashboard with bank and wearable sync, a scheduler and alerts; 130+ tests

NDD Copilot | *Python, scikit-learn, ChromaDB* | demo 2025

- Dementia referral aid: vector search over 2,149 records plus a random forest (0.82 ROC-AUC)

Leadership

President of Risk Management, CalGreeks: safety for 500+ attendees across 35 fraternities 2024 – 2025

Debate Team Captain: Hong Kong national champions (2021); Best Speaker, Singtao National 2020 – 2022

Technical Skills

Languages: Python, TypeScript, C/C++, Java, SQL

AI & ML: LLM agents, Model Context Protocol, evals, realtime speech models, vector search, scikit-learn

Infrastructure: AWS (Lambda, EventBridge, CloudWatch, Bedrock, S3), Azure OpenAI, IaC, CI/CD, FastAPI, React
